

IN THE SPECIFICATION:

Please replace paragraph 0051 beginning at page 11, as follows:

A¹
[0051] Thus, in the embodiment shown, the dependent objects list 316 is not an actual list of objects, but rather a set of offsets into the sanitized CREATE TRIGGER statement 320 that can be used to determine the position of the dependent objects. As such, the term "list" contemplates any implementation including actual lists, offsets, etc. More generally, the dependent objects list 316 may be considered an "area" which may be configured in any manner to represent dependent objects. In addition, it should be noted that the dependent objects list 316 identifies all instances of an object in the same statement. Accordingly, there may be multiple entries for the same object name.
